Getting started with your SmartRooms Comfort Controller is as easy as ... 1,2,3.

Notes:

° Your System is calling for heat when a 'Down Arrow' is displayed: igsqcup

° Your System will turn ON when the temperature difference between the Comfort Settings and the actual floor temperature is more than 2° Fahrenheit (1° Celsius).

SmartRooms Comfort Controller displays the current time and room temperature. It also displays the day of the week and the given temperature set point. It is programmable and operational in both English and French. See the Secondary Features section on Page '3/6' to set language preference.

Smart Rooms

Set Daily Programs

Use this function to program your temperature set points for each day of the week. The controller accepts up to five set points per day, the first starting at 12:00am, the last finishing at 11:59pm.

Repeat steps 5-10 until you reach program 5 or until you reach 11:59PM.

To copy all the programs from Sunday to the rest of the six remaining days:

Note: "Copy Days" saves you programming time. If you prefer your weekdays programmed differently from the weekend, program Sunday as if it were Monday. Use "Copy Days" to make all days the same then return to step 4 and modify the weekend program.

Ready to Operate

After setting all of your day's programs your SmartRooms Comfort Controller is ready to start operating on its own. If at any time you wish to override your day program temperature settings, you can easily press the **Cancel/Occ** button to activate the Occupied Temperature Override. The light below the button will be on when the override is activated. Pressing the **Cancel/Occ** button again will reactivate the regular schedules. Should you forget to cancel the override, the SmartRooms Comfort Controller will remain in Manual Mode - your programmed schedule will not become activated. The occupied temperature setting can also be easily changed by pressing the **Up** and **Down** arrows when your time, date and temperature are being displayed.

Set Occupied Temp

Use this function to set the default room temperature when you choose to override your daily programs. To override the daily programs, press the Occupied button to set the controller in manual mode (Green LED on).

Smart Rooms

Use this chart to keep track of your preferred program schedules. Enter the program end-time and desired temperature in each of the given boxes.

Day	Prog1 time	Prog1 temp	Prog2 time	Prog2 temp	Prog3 time	Prog3 temp	Prog4 time	Prog4 temp	Prog5 time	Prog5 temp

Set Daylight Savings Time (Cont'd)

Test Ground Fault

Use this function to test the ground fault interrupt circuit in your controller. For safety, it is recommended you do this test once a month.

If the controller screen reads "BAD GFI" instead of "GFI PASS", wait 10 seconds and redo the test. If you get the same reading, then the floor warming system must be tested for an electric short and for continuity.

Test Ground Fault (Cont'd)

NOTE: THE POWER MODULE MUST BE DISCONNECTED TO TEST FOR AN ELECTRIC SHORT. THIS PROCEDURE SHOULD BE DONE BY A QUALIFIED PERSON WHERE REQUIRED BY LAW & BY PERSONS AWARE OF THE HAZARDS INVOLVED.

Please contact your distributor for further instructions.

Troubleshooting

Use the following information to troubleshoot your comfort controller.

Room T* - This indicates that the floor sensor is not working and could be damaged. No need to worry, your SmartRooms Controller has a back up sensor located in the face plate. Your floor warming system will continue to function normally. You may want to do one of the following:
A) Remove the face plate and check to see if the sensor is properly connected to the back of the face plate.

B) Leave everything as is.

C) Replace the sensor. To do this you will likely have to remove tiles. Caution should be taken not to damage the heating cable.

Garbled Screen - Press 'Menu', if this does not work, unplug the controller, wait a few minutes and plug it in again.

Warranty

Therma-Ray Inc. one (1) Year Limited Warranty. Therma-Ray Inc. warrants the controller is free of defects in material and workmanship after proper installation for a one (1) year period from the date of installation. During this period, Therma-Ray Inc. will replace or repair the controller without charge if it has been used under normal conditions. This warranty does not cover delivery costs. The warranty does not apply if poorly installed or damaged after installation. Therma-Ray Inc. will not compensate for consequential damage, direct or indirect, resulting from the failure of the controller. All other representations, warranties and conditions, whether oral or written, express or implied, statutory or otherwise are expressly excluded. The defective controller must be returned to the place of purchase or sent prepaid to Therma-Ray Inc.
